

Subject: Professor of Structural Engineering at the University of Glasgow

The University of Glasgow (UK) is seeking to appoint a new Professor of Structural Engineering and, given the relevance of the post to geo-materials such as concrete, we would welcome any help you may be able to provide us in identifying potential candidates for this post. Please feel free to forward this letter to colleagues who you think may be interested in this opportunity.

This position is available for a candidate who will provide academic leadership and conduct world-class research in Structural Engineering. The post-holder will develop strategic research interests in Structural Engineering and contribute to and enhance teaching at undergraduate and postgraduate levels. The post-holder will join the Infrastructure and Environment Research Division in the School of Engineering.

A candidate of appropriate stature and reputation will be considered for appointment to the Regius Chair of Civil Engineering. This post was created by Queen Victoria in 1840 and was the first University Chair in Engineering to be established in the UK.

Full details can be found here:
