

**Assistant or Associate  
Professor of Petroleum  
Engineering**

**Delft University of Technology is the largest technical university in the Netherlands and internationally leading in scientific research. The Department of Geotechnology stands for top-level research and education aimed in finding answers to tomorrow's questions on the use of the Earth's natural resources and its subsurface space. It has an international faculty and student body and excellent laboratory facilities.**

The Department of Geotechnology at Delft University of Technology is looking for an Assistant or Associate Professor of Petroleum Engineering.

For this position, we are particularly interested in candidates who can build on our strengths and emerging programmes in data assimilation and optimisation, EOR, unconventional gas, the interface between petroleum engineering and geosciences, and fundamental aspects of flow in porous media. The successful applicant will supervise research and teach undergraduate and graduate classes related to subsurface aspects of petroleum production, and will be expected to acquire external research funding. Close cooperation with other members of the scientific staff of the section, department and wider university is essential.

Applicants should have a PhD in a relevant area and have performed successful research published in refereed journals. A candidate with expertise in laboratory or computational research is preferred. Experience with the oil and gas industry is desired but not required. Evidence of teaching excellence is highly desired.

Closing date is 1 October 2011.
